

FOR IMMEDIATE RELEASE**Sleek Audio SA6 Customisable Earphone Begins The Headphone Revolution**

BRIGHTON, UK (7 May, 2008) – [KS Distribution](#) today announced that it has signed a distributor agreement with [Sleek Audio](#), of Bradenton, Florida in the USA, to make the SA6 customisable earphone available to the UK market.

The headphone revolution has just begun! For the first time it's possible to tune an In Ear Monitor (IEM) style headphone to enhance the listening experience.

The new Sleek Audio SA6 earphone is the first fully customisable headphone that can be custom tuned to alter the frequency response of the earphone within the ear canal.

**Tune the Earphone to Suit your Musical Taste**

Based on 30 years experience in the hearing aid industry, Sleek Audio's Mark and Jason Krywko have developed the SA6 to be fully customisable, enabling headphone owners for the first time to be able to alter frequency response to suit their individual musical taste and to match their ears.

The miniature SA6 has an innovative multi-stage Variable Equalization System (VQ), which allows complete customization of the sound, giving the owner the freedom to control the bass and treble response as they wish.

More Innovative Design

The innovations don't stop there. The SA6 has a cord that can be detached from the headphone body, which for the style conscience means the colour can be changed to match clothes or their MP3 player. Or more practically the cable can be swapped to replace a cord that has been accidentally crushed or broken.

When Sleek Audio designed the SA6 they scrapped the conventional thinking that more drivers or larger speakers are better, and instead researched ways to accomplish the same broad frequency response while still delivering a product a fraction the size of their competitors. The result is a miniature earphone that sounds silky smooth and musical, with excellent comfort and ergonomics to create the best listening experience.

Exciting Future Wireless Plans

Sleek Audio doesn't plan on stopping at the SA6 In Ear Monitor. Jason Krywko and his team are busy developing a wireless upgrade for the SA6, due to for launch in late 2008. It will be possible to simply unclick the wired cable and attach a wireless receiver, meaning existing SA6 owners will not have to fork out for a new setup and owners who buy the wireless model will also be able to connect with wires. Sleek Audio plans to make all models compatible with their interchangeable cable and wireless setup.
